

Glossary

Action

One of a fixed set of functions all datatypes may support. Not all datatypes support all actions.

Context

Datatype

Datatypes are the foundation of Red...

default!

Dialect

An embedded DSL that shares the same syntax as the Red language.

Domain Specific Language (DSL)

A computer language specialized to a particular application domain. Sometimes called a (POL) Problem Oriented Language.

Draw

Event

libRed

List

Mezzanine

This is a Rebol term. It is used to mean a function written in Rebol (as opposed to being written in C) that is included in the standard distribution. A mezzanine in Red is a function written wholly in Red that is included in the standard distribution. Mezzanine functions do not require compilation.

Module

Native

Functions written in Red/System, and exposed for use in Red.

Number

number!

Object

Pane

Path

Pseudo-type

An informal name for **typeset**.

Routine

A Red/System function written inline in Red.

Runtime

scalar!

Series

series!

String

Typeset

Typesets are groupings of datatypes with shared characteristics...
